VERTEX

AIR-GROUND LITTORAL

An exclusive two-day symposium where companies will work together with Army experts to inform the Army's understanding of how new technologies can address specific use cases in the air-ground littoral.

JULY 16-17, 2024 | AUSTIN, TEXAS

VERTEX | Air-Ground Littoral

Hosted by Army Futures Command, this event brings together commercial innovators and US Army experts for a technical exchange on new and novel solutions.

VERTEX | Air-Ground Littoral will capture market intelligence that can be used to inform everything from Army concepts to requirements in the space between the ground a few thousand feet above it. VERTEX facilitates a meaningful exchange of technical information between industry innovators and the Army end-users.

Who will be there?

VERTEX attendees include Army leaders, subject matter experts, and others from across Army Futures Command as well as Army Program Executive Offices (PEOs) with a vested interest in the air-ground littoral space. Also in attendance will be commercial technologists, founders, and subject matter experts who can contribute to a meaningful dialogue during VERTEX panels and use case breakout sessions.

The idea is to facilitate a meaningful exchange of technical information on emerging technology in the air-ground littoral.

What's on the Agenda?

The morning agenda includes keynotes and panel discussions led by military and industry stakeholders.

In the afternoons, participants will break into small groups to discuss different challenges and technologies that can address the Army's most critical use cases in this increasingly important field.

Here is what you can look forward to at VERTEX | Air-Ground Littoral

Gain diverse technical insights from entrepreneurs, industry leaders, and investors.

Uncover new applications for your technology and learn about critical Army use cases.

Get a firsthand look at the Army's funding opportunities from the four-star command that's responsible for Army transformation.

Discover more about operations within the air-ground littoral and anticipated Army needs.

Break into the government marketplace and connect with Army leaders with a vested interest in funding solutions.

Network with technologists, founders, and creators working on the leading edge of UAS technology.

Testimonials

The market intelligence discussions at VERTEX | Air-Ground Littoral are valuable for the entire ecosystem, not just for the US Army. Here's what past attendees have said about VERTEX:

- "The event had a unique balance of ideation, learning, network building all anchored on an obvious need of the Army to understand its workforce (and who's within it) to actually put people first."

-VERTEX | Human Performance Attendee

- "It was useful to hear about the Army's technical priorities. I learned many useful technical details from other private industry representatives and some of our own robotic technologies will be improved as a result."

-VERTEX | Robotics Attendee

- "It's a great opportunity for collaboration between DoD and industry in a smaller, more focused forum."

-VERTEX | Contested Logistics Attendee

Attendees get to explore promising concepts, tackle real-world use cases, and uncover current opportunities and trends – all in one place.
