VERTEX

TACTICAL INFORMATION & NETWORK

VERTEX integrates the Army, innovators, and end users with the real-life context in which technology will be used. Industry gets involved at the front end to inform solicitations, requirements, concepts, and policy. It's a completely unique opportunity to forge the future of capability development.

NOVEMBER 19-20, 2024 | AUSTIN, TEXAS

VERTEX|Tactical Information and Network

VERTEX | Tactical Information and Network is an exclusive two-day symposium in partnership with Next Generation Command and Control on the data and networks commanders use to understand the environment and to lead and assess operations. Next generation tactical networks will be open and modular, and will have to manage unprecedented amounts of data coming from sensors, uncrewed systems and Soldiers. How quickly and accurately this information transforms into common understanding across a formation and how easily Soldiers can access, manipulate and share information translates directly into rapid, accurate decision making and effective operations.

Who will be there?

VERTEX government attendees extend across the Army's solution development enterprise including Army Futures Command, program executive offices, cross functional teams, requirements writers, concept developers, and more. Industry attendees include commercial technologists, founders, and market experts who can contribute to a meaningful dialogue. While there will be opportunities to build relationships during VERTEX, the goal is to keep the focus on the technology, not on contracts or business development.

The idea is to facilitate a meaningful exchange of technical information on emerging data and network technology.

What's on the Agenda?

The morning agenda includes keynotes and panel discussions led by military and industry stakeholders.

In the afternoons, participants will break into small groups to discuss different challenges and solutions that can address the Army's most critical command and control use cases.

Here is what you can look forward to at VERTEX Tactical Information and Network:

- Gain diverse technical insights from entrepreneurs, industry leaders, and investors.

- Uncover new applications for your technology and learn about critical Army use cases.

- Get a firsthand look at the Army's funding opportunities from the four-star command that's responsible for Army transformation.

- Discover more about next generation network challenges and Army needs.

- Break into the government marketspace and connect with Army leaders with a vested interest in funding solutions.

- Connect with technologists, founders, and creators working on the leading edge of data and network technology.

Testimonials

The market intelligence discussions at VERTEX | Tactical Information and Network are valuable for the entire ecosystem, not just for the US Army. Here's what past attendees have said about VERTEX:

> "The event had a unique balance of ideation, learning, network building all anchored on an obvious need of the Army to understand its workforce (and who's within it) to actually put people first."
>
> -VERTEX | Human Performance Attendee

> "It was useful to hear about the Army's technical priorities. I learned many useful technical details from other private industry representatives and some of our own robotic technologies will be improved as a result."
>
> -VERTEX | Robotics Attendee

> "It's a great opportunity for collaboration between DoD and industry in a smaller, more focused forum."
>
> -VERTEX | Contested Logistics Attendee

VERTEX provides a great opportunity to meet government representatives and other industry partners to address Army needs and ask questions directly to stakeholders.

VERTEX

TACTICAL INFORMATION & NETWORK

NOVEMBER 19–20, 2024 | AUSTIN, TEXAS

How to Attend

Apply at vertex.aal.army to request an invitation to VERTEX | Tactical Information and Network.

Space is limited to 150 attendees. We will review your application for security and to ensure alignment with Army use cases before extending an invitation.

We'll let you know no later than October 25 if you are selected to participate.

Please do not make travel arrangements until you have received an invitation to attend.

The registration deadline is October 23, 2024.
